CASE NARRATIVE

Laboratory number:	**179182**
Client:	**Mactec, Inc.**
Project:	**57255 001 22**
Location:	**Presidio / Baker Beach**
Request Date:	**04/29/05**
Samples Received:	**04/29/05**

This hardcopy data package contains sample and QC results for three soil samples, requested for the above referenced project on 04/29/05. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):
Encore samples not analyzed within 48 hours were frozen. No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):
Motor oil C24-C36 was detected between the MDL and the RL in the method blank for batch 101680; this analyte was either not detected in samples at or above the RL, or detected at a level at least ten times that of the blank. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
Low response was observed for bromomethane in the ICV analyzed 03/30/05 21:59; this analyte was not detected at or above the RL in the associated samples. High response was observed for chloroethane in the CCV analyzed 04/29/05 10:48; this analyte was not detected at or above the RL in the associated samples. Methylene chloride was detected between the MDL and the RL in the method blank for batch 101594; this analyte was not detected in samples at or above the RL. No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
High response was observed for dibenz(a,h)anthracene in the CCV analyzed 05/04/05 08:48; this analyte was not detected at or above the RL in the associated samples, and affected data was qualified with "b". Low internal standard response was observed for perylene-d12 in BBD2TP106(2.0) (lab # 179182-003). No other analytical problems were encountered.

Pesticides (EPA 8081A):
Low response was observed for 4,4'-DDT in the ICV analyzed 04/29/05 01:54; average ICV drift met method requirements. Low responses were observed for 4,4'-DDT and methoxychlor in the CCV analyzed 05/03/05 23:33; average CCV drift met method requirements. Low responses were observed for 4,4'-DDT and methoxychlor in the CCV analyzed 05/04/05 04:08; average CCV drift met method requirements. No other analytical problems were encountered.

PCBs (EPA 8082):
High surrogate recoveries were observed for decachlorobiphenyl in BBD2TP105(15.0) (lab # 179182-002), the LCS for batch 101667, and the MS of

Curtis & Tompkins, Ltd.

CASE NARRATIVE

Laboratory number:	**179182**
Client:	**Mactec, Inc.**
Project:	**57255 001 22**
Location:	**Presidio / Baker Beach**
Request Date:	**04/29/05**
Samples Received:	**04/29/05**

PCBs (EPA 8082):
BBD2TP106(2.0) (lab # 179182-003); the corresponding TCMX surrogate recoveries were within limits. No other analytical problems were encountered.

Metals (EPA 6020 and EPA 7471A):
Low recoveries were observed for nickel and lead in the MS/MSD of BBD2TP105(11.5) (lab # 179182-001); the BS/BSD were within limits, and the associated RPDs were within limits. High % differences were observed for mercury, molybdenum, and zinc in the serial dilution for batch 101690 and the serial dilution of BBD2TP105(11.5) (lab # 179182-001). A number of analytes were detected between the MDL and the RL in the method blank for batch 101627. No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):
No analytical problems were encountered.

Sand weighed out for QC samples	EM44258	AMS 5/3/05
Samples were dried with CH2Cl2-rinsed ~~granular~~ powdered Na2SO4	EM44135453	
1.0 mL of TEH_SURR surrogate solution was added to all samples	5449A	
1.0 mL of TEH_SP matrix spiking solution was added to all spikes	5305B	
≥ 75 mL of 1+1 (CH_2Cl_2+Acetone) was added to all CH_2Cl_2	EM45089	
Acetone	EM45083	
Samples were: ☐ sonicated 3 times ☑ placed on shaker table at:	0915	
taken off shaker table at:	1115	
Extracts filtered through baked, rinsed powdered Na_2SO_4	EM44135453	
Concentrated to volumes as noted above ✓

CASE NARRATIVE

Laboratory number:	179266
Client:	Mactec, Inc.
Project:	57255 001 22
Location:	Presidio / Baker Beach
Request Date:	05/05/05
Samples Received:	05/05/05

This hardcopy data package contains sample and QC results for seven soil samples, requested for the above referenced project on 05/05/05. The samples were received cold and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):
No analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):
Diesel C10-C24 was detected between the MDL and the RL in the method blank for batch 101791; this analyte was either not detected in samples at or above the RL, or detected at a level at least ten times that of the blank. BB1TP108(5.0) (lab # 179266-007) and DUP(050405) (lab # 179266-004) were diluted due to the dark, viscous nature of the sample extracts. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
Encore samples not analyzed within 48 hours were frozen. Low responses were observed for bromomethane and Freon 12 in the ICV analyzed 05/04/05 23:18; these analytes were not detected at or above the RL in the associated samples. High response was observed for Freon 113 in the ICV analyzed 05/04/05 23:51; this analyte was not detected at or above the RL in the associated samples. Low response was observed for carbon disulfide in the CCV analyzed 05/05/05 11:34; this analyte met minimum response criteria. High recoveries were observed for 1,1-dichloroethene in the MSD for batch 101759 and the MS/MSD of BB1TP108(5.0) (lab # 179266-007); the LCS was within limits, the associated RPDs were within limits, and this analyte was not detected at or above the RL in the associated samples. Methylene chloride was detected between the MDL and the RL in the method blank for batch 101759; this analyte was not detected in samples at or above the RL. Methylene chloride was detected between the MDL and the RL in many samples; this analyte is a common laboratory contaminant. No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
High responses were observed for benzo(g,h,i)perylene and dibenz(a,h)anthracene in the CCV analyzed 05/12/05 16:09; these analytes were not detected at or above the RL in the associated samples, and affected data was qualified with "b". Low internal standard response was observed for perylene-d12 in DUP(050405) (lab # 179266-004) and BB1TP108(5.0) (lab # 179266-007), due to matrix interference. High surrogate recoveries were observed for terphenyl-d14 in BB1TP106(6.0) (lab # 179266-001) and

Curtis & Tompkins, Ltd.

CASE NARRATIVE

Laboratory number:	179266
Client:	Mactec, Inc.
Project:	57255 001 22
Location:	Presidio / Baker Beach
Request Date:	05/05/05
Samples Received:	05/05/05

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
DUP(050405) (lab # 179266-004), due to matrix interference. These samples seem to be duplicates of each other. BB1TP106(6.0) (lab # 179266-001) was diluted due to the dark, viscous nature of the sample extract. No other analytical problems were encountered.

Pesticides (EPA 8081A):
High ICAL percent RSD (relative standard deviation) was observed for 4,4'-DDT in the calibration analyzed 05/11/05 23:37; average ICAL %RSD met method requirements, and affected data was qualified with "b". High response was observed for methoxychlor in the ICV analyzed 05/12/05 12:27; average ICV drift met method requirements, and this analyte was not detected at or above the RL in the associated samples. Low responses were observed for 4,4'-DDT in the CCV analyzed 05/13/05 00:16, the CCV analyzed 05/13/05 12:50, and the CCV analyzed 05/13/05 23:23; average CCV drift met method requirements. High response was observed for 4,4'-DDD in the CCV analyzed 05/13/05 12:50; average CCV drift met method requirements. BB1TP106(3.5) (lab # 179266-002), BB1TP106(6.0) (lab # 179266-001), BB1TP108(5.0) (lab # 179266-007), and DUP(050405) (lab # 179266-004) were diluted due to the dark, viscous nature of the sample extracts. No other analytical problems were encountered.

PCBs (EPA 8082):
High response was observed for Aroclor-1260 in the CCV analyzed 05/07/05 01:48; this analyte was not detected at or above the RL in the associated sample. High surrogate recoveries were observed for TCMX in the MS/MSD of BB1TP108(5.0) (lab # 179266-007); the corresponding decachlorobiphenyl surrogate recoveries were within limits. No other analytical problems were encountered.

Metals (EPA 6020 and EPA 7471A):
Low recoveries were observed for mercury in the MS/MSD of BB1TP107(7.0) (lab # 179266-005); the BS/BSD were within limits, and the associated RPD was within limits. Low recoveries were observed for chromium, nickel, and vanadium in the MSD of BB1TP106(6.0) (lab # 179266-001); the BS/BSD were within limits. High RPD was observed for many analytes in the MS/MSD of BB1TP106(6.0) (lab # 179266-001); the RPD was acceptable in the BS/BSD. High % differences were observed for mercury and molybdenum in the serial dilution of BB1TP106(6.0) (lab # 179266-001) and the serial dilution of BB1TP107(7.0) (lab # 179266-005). Molybdenum was detected between the MDL and the RL in the method blank for batch 101858. No other analytical problems were encountered.

Curtis & Tompkins, Ltd.

CASE NARRATIVE

Laboratory number:	179266
Client:	Mactec, Inc.
Project:	57255 001 22
Location:	Presidio / Baker Beach
Request Date:	05/05/05
Samples Received:	05/05/05

Moisture (ASTM D2216/CLP):
No analytical problems were encountered.

Dioxins and Furans (EPA 8290):
Eno River Labs, LLC in Durham, NC performed the analysis. Please see the Eno River Labs, LLC case narrative.

COOLER RECEIPT CHECKLIST

Login#: 179266 Date Received: 5-5-95 Number of Coolers: 1
Client: Mactec Project: Baker Beach

A. Preliminary Examination Phase
Date Opened: 5-5-95 By (print): Troy Windsor (sign) Troy Windsor

1. Did cooler come with a shipping slip (airbill, etc.)? ..... YES (NO)
   If YES, enter carrier name and airbill number: _____
2. Were custody seals on outside of cooler? ..... YES (NO)
   How many and where? _____ Seal date: _____ Seal name: _____ N/A
3. Were custody seals unbroken and intact at the date and time of arrival? ..... YES NO
4. Were custody papers dry and intact when received? ..... (YES) NO
5. Were custody papers filled out properly (ink, signed, etc.)? ..... (YES) NO
6. Did you sign the custody papers in the appropriate place? ..... (YES) NO
7. Was project identifiable from custody papers? ..... (YES) NO
   If YES, enter project name at the top of this form.
8. If required, was sufficient ice used? Samples should be 2-6 degrees C. ..... YES NO
   Type of ice: wet Temperature: Cold - no temp blank

B. Login Phase
Date Logged In: 5-5-95 By (print): Troy Windsor (sign) Troy Windsor

1. Describe type of packing in cooler: In ziplec type bags
2. Did all bottles arrive unbroken? ..... (YES) NO
3. Were labels in good condition and complete (ID, date, time, signature, etc.)? ..... (YES) NO
4. Did bottle labels agree with custody papers? ..... (YES) NO
5. Were appropriate containers used for the tests indicated? ..... (YES) NO
6. Were correct preservatives added to samples? ..... YES NO N/A
7. Was sufficient amount of sample sent for tests indicated? ..... (YES) NO
8. Were bubbles absent in VOA samples? If NO, list sample Ids below ..... YES NO N/A
9. Was the client contacted concerning this sample delivery? ..... YES NO
   If YES, give details below.
   Who was called? _____ By whom? _____ Date: _____

	Mfg & Lot # / LIMS # / Time	Date/Initials
Sand weighed out for QC samples	EM44028452	SHD 5/6/05
Samples were dried with CH2Cl2-rinsed ~~granular~~ Na2SO4	EM44135453	
1.0 mL of TEH_SURR surrogate solution was added to all samples	C4491B	
1.0 mL of TEH_SP matrix spiking solution was added to all spikes	5305F	
≥ 75 mL of 1+1 (CH_2Cl_2+Acetone) was added to all CH_2Cl_2	45071	
Acetone	45033	
Samples were: ☑ sonicated 3 times ☐ placed on shaker table at:	N/A	
taken off shaker table at:	N/A	
Extracts filtered through baked, rinsed powdered Na_2SO_4	EM44135453	
Concentrated to volumes as noted above	✓

Sand weighed out for QC samples	EM 440 28452	SLC 05/12/05
Samples were dried with baked, CH_2Cl_2-rinsed granular Na_2SO_4	EM 41303507	
1.0 mL of surrogate solution was added to all samples	S369F	
1.0 mL of matrix spiking solution was added to all spikes	32128	
≥100mL 1:1 CH_2Cl_2:Acetone was added to all: CH_2Cl_2	EM 45071	
Acetone	EM 44233	
Samples were: ☑ sonicated 3 times ☐ soxhlet extractors on at:	✓	
soxhlets off at:	N/A	
Extracts filtered through baked, CH_2Cl_2-rinsed powdered Na_2SO_4	EM 44363507 / EM 44139163	
Concentrated: ☑ to volumes as noted above ☐ to clean-up volume TOCAN	✓	
Clean-up (if necessary): ☐ GPC (see GPC run log) ☐ Silica Gel	N/A	
Concentrated to final volumes as noted above	✓

CASE NARRATIVE

Analysis of Samples for the Presence of

Polychlorinated Dibenzo-p-dioxins and Dibenzofurans by

High-Resolution Chromatography / High-Resolution Mass Spectrometry

Method 8290 Rev. 0 (9/94)

Date:	June 2, 2005
Client ID:	Curtis & Tompkins
P.O. Number:	179266
Project Number:	65087r1

Eno River Labs, LLC has acquired the assets of Triangle Laboratories, Inc. and will continue its operations.

This report should only be reproduced in full. Any partial reproduction of this report requires written permission from Eno River Labs, LLC

Overview

The sample and associated QC samples were extracted and analyzed according to procedures described in EPA Method 8290 Rev. 0 (9/94). Any particular difficulties encountered during sample handling will be discussed in the QC Remarks section below. This report contains results from only the 8290 dioxin/furan analysis of one soil sample.

Quality Control Samples

A laboratory method blank was prepared along with each batch of samples.

A laboratory control spike (LCS) sample was extracted and analyzed along with the sample. A report summarizing the analyte recoveries for this sample is included in the data package.

Matrix spike (MS) and matrix spike duplicate (MSD) samples were extracted and analyzed along with the samples. A report summarizing the analyte recoveries and relative percent differences for these samples is included in the data package.

Quality Control Remarks

This release of this particular set of Curtis & Tompkins analytical data by Eno River Labs, LLC was authorized by the Quality Control Chemist who has reviewed each sample data package following a series of inspections/reviews. When applicable, general deviations from acceptable QC requirements are identified below and comments are made on the effect of these deviations upon the validity and reliability of the results. Specific QC issues associated with this particular project are:

Sample receipt: One soil sample was received from Curtis & Tompkins at 3°C in good condition on May 6, 2005 and stored in a refrigerator at 4°C.

Sample Preparation Laboratory: None

Mass Spectrometry: None

Data Review: Sample BB1TP108 (5.0) has been diluted by a factor of ten and reanalyzed in order to bring the results within the calibration range. Only those results that are flagged "E" in the original analysis have been reported from the diluted analysis. Because additional internal standard solution has been added to the extract, the results are not recovery-corrected.

The analyte recoveries and/or associated relative percent differences (RPD) for 1,2,3,4,6,7,8-HpCDD, OCDD and OCDF in the matrix spike (MS) and matrix spike

duplicate (MSD) analyses are outside method requirements. These variances are due to high levels of the associated analytes in the native sample. When the amount in the native sample approaches more than one-forth the spiked analyte level, statistical analysis becomes unreliable and the RPDs and analyte recoveries can not be assessed using the QC samples.

Other Comments: No 2,3,7,8-substituted target analytes were detected in the laboratory blank above the target detection limit (TDL).

Method 8290 contains separate criteria for beginning and ending continuing calibrations. When the ending calibration meets criteria established for the beginning calibration, the average response factor from the initial calibration is used. When the ending calibration only meets the less stringent criteria specified for an ending calibration, the average of the response factor from the beginning and ending calibration is used for analyte and internal standard calculations. Affected samples are identified by the listing of both the beginning and ending calibration filename on the sample report.

EMPC stands for **E**stimated **M**aximum **P**ossible **C**oncentration. A dioxin or furan analyte is quantitated as an EMPC when the detected analyte meets the retention time criteria of a dioxin or furan, but not the isotopic ratio criteria. Interferences, such as PCBs, may co-elute or cause quantitative interference, causing a peak ratio to be outside criteria. Low level peaks that are close to the detection limits can be significantly affected by instrument and chemical noise, causing the ratio to be outside criteria. As a result, the reported value(s) should be considered estimated at the highest level possible.

The analytical results presented in this report are consistent with the guidelines of EPA Method 8290 Rev. 0 (9/94). Any exceptions have been discussed in the QC Remarks section of this case narrative with emphasis on their effect on the results. Should Curtis & Tompkins have any questions or comments regarding this data package, please feel free to contact our customer service at (919) 281-4013.

Kenneth Varley

Report Preparation Chemist
Eno River Labs, LLC

The total number of pages in the data package is : 118 .

Method 8290 Sample Calculations:

Analyte Concentration

The concentration or amount of any analyte is calculated using the following expression.

$$C_{(\sigma)} = \frac{A_\sigma * Q_\beta}{A_\beta * RRF_{(\sigma)} * W}$$

Where:

$C_{(\sigma)}$	=	concentration or amount of a given analyte
A_σ	=	integrated current for the characteristic ions of the analyte
A_β	=	integrated current of the characteristic ions of the corresponding internal standard
Q_β	=	amount of internal standard added to the sample before extraction
$RRF_{(\sigma)}$	=	mean analyte relative response factor from the initial calibration
W	=	sample weight or volume

Detection Limits

The detection limit reported for a target analyte that is not detected or presents an analyte response that is less than 2.5 times the background level is calculated by using the following expression. The area of the analyte is replaced by the noise level measured in a region of the chromatogram clear of genuine GC signals. The detection limits represent the maximum possible concentration of a target analyte that could be present without being detected.

$$DL_{(\sigma)} = \frac{2.5 * H * Q_\beta}{H_\beta * RRF_{(\sigma)} * W}$$

Where:

$DL_{(\sigma)}$	=	estimated detection limit for a target analyte
2.5	=	minimum response required for a GC signal
H	=	sum heights of the noise
H_β	=	sum of peak heights of the characteristic ions of the corresponding internal standard
Q_β	=	amount of internal standard added to the sample before extraction
$RRF_{(\sigma)}$	=	mean analyte relative response factor from the initial calibration
W	=	sample weight or volume

Data Flags

In order to assist with data interpretation, data qualifier flags are used on the final reports. Please note that all data qualifier flags are subjective and are applied as consistently as possible. Each flag has been reviewed by two independent Chemists and the impact of the data qualifier flag on the quality of the data discussed above. The most commonly used flags are:

A **'B'** flag is used to indicate that an analyte has been detected in the laboratory method blank as well as in an associated field sample. The 'B' flag is used only when the amount of analyte found in the sample is less than 20 times that found in the associated blank. This flag denotes possible contribution of background laboratory contamination to the concentration or amount of that analyte detected in the field sample.

An **'E'** flag is used to indicate a concentration based on an analyte to internal standard ratio which exceeds the range of the calibration curve. Values which are outside the calibration curve are estimates only.

An **'I'** flag is used to indicate labeled standards have been interfered with on the GC column by coeluting, interferent peaks. The interference may have caused the standard's area to be overestimated. All quantitations relative to this standard, therefore, may be underestimated.

A **'J'** flag is used to indicate a concentration based on an analyte to internal standard ratio which is below the calibration curve. Values which are outside the calibration curve are estimates only.

A **'PR'** flag is used to indicate that a GC peak is poorly resolved. This resolution problem may be seen as two closely eluting peaks without a reasonable valley between the peak tops, overly broad peaks, or peaks whose shapes vary greatly from a normal distribution. The concentrations or amounts reported for such peaks are most likely overestimated.

A **'Q'** flag is used to indicate the presence of QC ion instabilities caused by quantitative interferences.

An **'RO'** flag is used to indicate that a labeled standard has an ion abundance ratio that is outside of the acceptable QC limits, most likely due to a coeluting interference. This may have caused the percent recovery of the standard to be overestimated. All quantitations versus this standard, therefore, may be underestimated.

An **'S'** flag indicates that the response of a specific PCDD/PCDF isomer has exceeded the normal dynamic range of the mass spectrometer detection system. The corresponding signal is saturated and the reported analyte concentration is a 'minimum estimate'. When the 'S' qualifier is used in the reporting of 'totals', there is saturation of one (not

necessarily from a specific isomer) or more saturated signals for a given class of compounds. Results for saturated analytes are reported as greater than the upper calibration limit.

A **'U'** flag is used to indicate that a specific isomer cannot be resolved from a large, co-eluting interferent GC peak. The specific isomer is reported as not detected as a valid concentration cannot be determined. The calculated detection limit, therefore, should be considered an underestimated value.

A **'V'** flag is used to indicate that, although the percent recovery of a labeled standard may be below a specific QC limit, the signal-to-noise ratio of the peak is greater than ten-to-one. The standard is considered reliably quantifiable. All quantitations derived from the standard are considered valid as well.

An **'X'** flag is used to indicate that a polychlorodibenzofuran (PCDF) peak has eluted at the same time as the associated diphenyl ether (DPE) and that the DPE peak intensity is at least ten percent of the total PCDF peak intensity. Total PCDF values are flagged 'X' if the total DPE contribution to the total PCDF value is greater than ten percent. All PCDF peaks that are significantly influenced by the presence of DPE peaks are either reported as "estimated maximum possible concentration (EMPC) values without regard to the isotopic abundance ratio, or are included in the detection limit value depending on the analytical method.

ENO RIVER LABS, LLC
LIST OF CERTIFICATIONS AND ACCREDITATIONS

ENVIRONMENTAL

Primary NELAP Certificate: Florida Department of Health, #E87769; SDWA, Method 1613, 2,3,7,8-TCDD for Dioxin in Drinking Water; **CWA,** Method 1613, PCDD/PCDF & totals; **RCRA,** Methods 8280/8290, PCDD/PCDF & totals. Expires June 30, 2005.

Primary NELAP Certificate: State of New Jersey, Department of Environmental Protection, ID #NC010, CLC040001. CAA, Methods 0023A and MM5 (Sampling Train). **Secondary NELAP Certificate: SDWA,** Method 1613, 2,3,7,8-TCDD for Dioxin in Drinking Water; **CWA,** Method 1613, PCDD/PCDF & totals; **RCRA,** Method 8290, PCDD/PCDF & totals. Expires June 30, 2005.

State of Alabama, Department of Environmental Management. Laboratory ID # 40950. 2,3,7,8 TCDD (Dioxin) in drinking water. Expires July 31, 2005.

State of Alaska, Department of Environmental Conservation. Certificate #NC1706-05. EPA 1613B, Dioxin (2378-TCDD). Expires December 21, 2005.

State of Arizona, Department of Health Services. Certificate #AZ0423. Drinking Water for Dioxin, Dioxins in Waste Water and Solid or Hazardous Waste. Expires May 25, 2005.

State of Arkansas, Department of Environmental Quality. Certificate # 04-060-0. Dioxins and Furans. Expires September 1, 2005.

State of California, Department of Health Services, Certificate No. I-2583. SDWA, Method 1613, 2,3,7,8-TCDD for Dioxin in Drinking Water; **CWA,** Method 1613, PCDD/PCDF & totals; **RCRA,** Methods 8280/8290, PCDD/PCDF & totals. Expires March 31, 2006.

State of Colorado, Department of Public Health and Environment. SDWA, Dioxin by EPA 1613. Expires April 30, 2005.

State of Connecticut, Department of Health Services. Registration # PH-0117. SDWA, Method 1613, 2,3,7,8-TCDD for Dioxin in Drinking Water; **CWA,** Method 1613, PCDD/PCDF & totals; **RCRA,** Methods 8280/8290, PCDD/PCDF & totals. Expires September 30, 2005.

Primary NELAP Certificate: Florida Department of Health, #E87769; SDWA, Method 1613, 2,3,7,8-TCDD for Dioxin in Drinking Water; **CWA**, Method 1613, PCDD/PCDF & totals; **RCRA**, Methods 8280/8290, PCDD/PCDF & totals. Expires June 30, 2005.

Georgia Department of Environmental Quality. SDWA, Method 1613, 2,3,7,8-TCDD for Dioxin in Drinking Water; **CWA**, Method 613, 2,3,7,8-TCDD AND Method 1613, PCDD/PCDF & totals; **RCRA**, Methods 8280/8290, PCDD/PCDF & totals; **CAA**, TO-9A, all dioxins/furans AND TO-13A, semi-volatiles; reciprocity based on FL-DOH NELAP Certificate, expires June 30, 2005.

Georgia Department of Natural Resources, ID # 953. SDWA 2,3,7,8-TCDD (Dioxin) by Method 1613B. Expires July 31, 2005.

Hawaii Department of Health. Certified for Dioxin under the Safe Drinking Water Act. "Accepted" status for regulatory purposes. Expires June 30, 2005.

Idaho Department of Health and Welfare. Dioxin in drinking water, EPA Method 1613. Expires July 31, 2004. Renewal pending.

Secondary NELAP Certificate: Illinois Environmental Protection Agency. Accreditation Number #200007, Certificate #001168; Drinking Water, Method 1613, 2,3,7,8-TCDD; Wastewater, Organic, Methods 1613; Hazardous and Solid Waste, Organic, Methods 8280A and 8290. Expires 30 September 2005.

Indiana Department of Health. Dioxin in drinking water, EPA method 1613. Lab ID # C-NC-01. Expires July 31, 2005.

Secondary NELAP Certificate: State of Kansas. Certificate # E-10215. Drinking Water, Method 1613, 2,3,7,8-TCDD; Wastewater, Methods 1613; Hazardous and Solid Waste, Methods 8280A and 8290. Expires July 31, 2005.

Commonwealth of Kentucky, Department for Environmental Protection. Lab ID #90060. 2,3,7,8 TCDD (Dioxin) in drinking water. Expires December 31, 2005.

Secondary NELAP Certificate: State of Louisiana Department of Environmental Quality. Certificate # 01979. CAA, TO-9A and TO-13A; **CWA**, Method 1613 PCDDs/PCDFs; **RCRA**, Methods 8280A & 8290 PCDDs/PCDFs; Misc. Methods 1613, 8280A & 8290. Expires 30 June 2005.

Secondary NELAP Certificate: State of Louisiana Department of Health & Hospitals. Certificate # LA040020. SDWA, Dioxin (2,3,7,8-TCDD) in Drinking Water. Expires December 31, 2005.

Maine Department of Human Services. Certification #: NC140. SDWA, Method 1613, 2,3,7,8-TCDD for Dioxin in Drinking Water; **CWA**, Method 1613, PCDD/PCDF. Expires May 30, 2005.

2445 S. Alston Avenue, Durham NC 27713 ◎ 919-281-4040 ◎ FAX 919-281-4070 ◎ www.enoriverlabs.com

Maryland Department of Health and Mental Hygiene. Certification # 235, SOC 21(Dioxin) Expires September 30, 2005.

Commonwealth of Massachusetts, Department of Environmental Protection, does not require Certification for Drinking Water Dioxin/Furan analysis.

State of Michigan, Department of Environmental Quality. SDWA; 2,3,7,8 TCDD by Method 1613. Expires July 31, 2005.

Minnesota Department of Health. The certification program in MN does not include dioxins/furans for CWA, SDWA of RCRA. See U.S. EPA Region V.

Mississippi State Department of Health. Dioxin in drinking water. No expiration date.

State of Montana Department of Public Health and Human Services. Dioxin in drinking water. December 31, 2004.

State of Nebraska Department of Health and Human Services. Reciprocal certification with the Florida DOH NELAP Certification. **SDWA,** Method 1613, 2,3,7,8-TCDD for Dioxin in Drinking Water. Expires June 30, 2005.

State of Nevada, Division of Environmental Protection. Lab Certificate No. NC140-2004-75. SDWA, Method 1613B, 2,3,7,8-TCDD for Dioxin in Drinking Water; **CWA,** Method 1613B, expires July 31, 2005.

Primary NELAP Certificate: State of New Jersey, Department of Environmental Protection, ID #NC010, CLC040001. CAA, Methods 0023A and MM5 (Sampling Train). **Secondary NELAP Certificate: SDWA,** Method 1613, 2,3,7,8-TCDD for Dioxin in Drinking Water; **CWA,** Method 1613, PCDD/PCDF & totals; **RCRA,** Method 8290, PCDD/PCDF & totals. Expires June 30, 2005.

State of New Mexico, Environment Department. Safe Drinking Water Act; 2,3,7,8-TCDD by Method 1613. Expires June 30, 2005.

Secondary NELAP Certificate: New York State Department of Health, LAB ID #11026. Potable Water, 2,3,7,8-TCDD, EPA 1613, Serial # 26053; **Non-Potable Water,** 2,3,7,8-TCDD, EPA 1613, Serial # 26054. Expires 1 April, 2006.

State of North Carolina, Department of Health and Human Services. Certificate # 37751. Dioxin in drinking water. Expires July 31, 2005.

North Dakota State Department of Health. Certificate # R-076. SDWA, Method 1613, 2,3,7,8-TCDD for Dioxin in Drinking Water; **CWA,** Method 1613, PCDD/PCDF; **RCRA,** Methods 8280A/8290, PCDD/PCDF. Expires July 31, 2005.

Ohio EPA. Ohio does not offer out-of-state lab certifications; certification by EPA Region 5 is honored. Ohio EPA #29382, Analyst #9999.

2445 S. Alston Avenue, Durham NC 27713 © 919-281-4040 © FAX 919-281-4070 © www.enoriverlabs.com

Oklahoma Department of Environmental Quality. Laboratory #9951. 2,3,7,8 TCDD of 118 (Dioxin). Expires August 31, 2005.

Secondary NELAP Certificate: **Oregon Environmental Laboratory Accreditation Program, Certificate No:-NC200001-002. SDWA,** Method 1613, 2,3,7,8-TCDD for Dioxin in Drinking Water; **CWA,** Method 1613, PCDD/PCDF; **RCRA**, Methods 8280/8290, PCDD/PCDFs. Expires January 31, 2006.

Pennsylvania Department of Environmental Protection. 2,3,7,8 TCDD (Dioxin) in Drinking water, EPA 1613 . Expires July 9, 2005.

State of Tennessee. Department of Environment and Conservation. ID #02992. Dioxin in Drinking water. Expires July 30, 2005.

Texas Natural Resource Conservation Commission. Certification Number: TX264-2002A. SDWA: Chemistry, Dioxin (2378-TCDD), EPA 1613. Expires March 31, 2006.

U.S. EPA Region V. 2,3,7,8 TCDD (Dioxin) in drinking water by method 1613B. Expires February 03, 2006. [Illinois, Indiana, Michigan, Minnesota, Ohio and Wisconsin]

U.S. EPA Region VIII, for the State of Wyoming. EPA Method 1613 for Dioxin in drinking water. Expires 20 October 2005.

U.S. Navy, NFESC IR QA; NFESC 413. Acceptance to perform samples analysis; water and solids by EPA Methods 8280A, 8290 and 1613B. Expires April 21, 2006.

Secondary NELAP Certificate: **State of Utah, Department of Health. ID # TRIA, Account # 9195445729 SDWA,** Method 1613, 2,3,7,8-TCDD for Dioxin in Drinking Water; CWA, Method 1613, PCDD/PCDF & totals; RCRA, Methods 8280/8290, PCDD/PCDF & totals. Expires June 30, 2005.

Commonwealth of Virginia, Department of General Services, Division of Consolidated Laboratory Services. ID # 00341. 2,3,7,8-TCDD (Dioxin) in drinking water, EPA Method 1613B. Expires June 30, 2005.

State of Washington, Department of Ecology. Lab Accreditation Number C067. Scope of Accreditation applies to Dioxins (PCDDs/PCDFs) by EPA methods 1613, 8280, and 8290 in potable and non-potable water. Expires February 8, 2005.

State of West Virginia, Department of Health & Human Resources. Certificate No. 9923C. 2,3,7,8-TCDD (Dioxin), 1613B. Expires December 31, 2005.

State of Wisconsin, Department of Natural Resources. Laboratory ID Number 999869530. Certified for 2,3,7,8-TCDD (Dioxin) in drinking water and for PCDD/PCDF. Expires August 31, 2005.

Printed: 21:55 06/02/2005

Data Review By: Initial KW ....Date... 6/2/05

Calculated Noise Height: 0.05

The Total Area for each peak with an ion abundance ratio outside ratio limits has been recalculated according to method requirements.

Page No. 1 Listing of T051423B.dbf

Data Review By: PAB 6/2/05

Channel specific noise levels computed from 'NL' heights.

The Total Area for each peak with an ion abundance ratio outside ratio limits has been recalculated according to method requirements.

				41:16		0.84	636.42	291.30	345.12	1.000	13C12-OCDD		IS8
						Height	148.35	67.25	81.10				
470-472			1 Peak				636.42						

Column Description.....	"Why" Code Description.....	QC Log Desc.....
M_Z -Nominal Ion Mass(es)	WL-Below Retention Time Window	A-Peak Added
..RT. -Retention Time (mm:ss)	WH-Above Retention Time Window	K-Peak Kept
Rat.1 -Ratio of M/M+2 Ions	SN-Below Signal to Noise Level	D-Peak Deleted
OK -RO=Ratio Outside Limits	<M-Below Method Detection Limit	T-Time Changed
Rel.RT-Relative Retention Time	NL-Channel Specific Noise Level	M-Peak Area Changed
		N-Name Changed
		X-Ether Interference

Data Review By: PaB 6/2/05

Channel specific noise levels computed from 'NL' heights.

The Total Area for each peak with an ion abundance ratio outside ratio limits has been recalculated according to method requirements.

Initial ....Date...

Data Review By: PAB 5/14/05

Channel specific noise levels computed from 'NL' heights.

The Total Area for each peak with an ion abundance ratio outside
ratio limits has been recalculated according to method requirements.

CASE NARRATIVE

Laboratory number:	179384
Client:	Mactec, Inc.
Project:	57255 001 22
Location:	Presidio / Baker Beach
Request Date:	05/11/05
Samples Received:	05/11/05

This hardcopy data package contains sample and QC results for one soil sample, requested for the above referenced project on 05/11/05. The sample was received on ice and intact.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
High responses were observed for benzo(g,h,i)perylene and dibenz(a,h)anthracene in the CCV analyzed 05/12/05 16:09; these analytes were not detected at or above the RL in the associated samples. No other analytical problems were encountered.

Pesticides (EPA 8081A):
High ICAL percent RSD (relative standard deviation) was observed for methoxychlor in the calibration analyzed 05/02/05 18:37; average ICAL %RSD met method requirements, and this analyte was not detected at or above the RL in the associated sample. High response was observed for methoxychlor in the ICV analyzed 05/12/05 12:27; average ICV drift met method requirements, and this analyte was not detected at or above the RL in the associated sample. Low responses were observed for 4,4'-DDT, endrin aldehyde, and methoxychlor in the ICV analyzed 05/02/05 22:47; average ICV drift met method requirements. High responses were observed for a number of analytes in the CCV analyzed 05/12/05 03:57; average CCV drift met method requirements. High responses were observed for a number of analytes in the CCV analyzed 05/11/05 16:27; average CCV drift met method requirements. Low response was observed for 4,4'-DDT in the CCV analyzed 05/13/05 00:16; average CCV drift met method requirements. Low surrogate recoveries were observed for decachlorobiphenyl and TCMX in the MSD for batch 101914; the parent sample was not a project sample. All other samples and QC in the batch have surrogate recoveries within criteria. All spike recoveries in the MSD were within criteria. No other analytical problems were encountered.

PCBs (EPA 8082):
No analytical problems were encountered.

Metals (EPA 6020 and EPA 7471A):
High recovery was observed for zinc in the MS of BB2ASB100(4.0) (lab # 179384-001); the BS/BSD were within limits. High RPD was also observed for zinc in the MSD of BB2ASB100(4.0) (lab # 179384-001); the RPD was acceptable in the BS/BSD. Response exceeding the instrument's linear range was observed for barium in the MS/MSD of BB2ASB100(4.0) (lab # 179384-001). High % difference was observed for molybdenum in the serial dilution of BB2ASB100(4.0) (lab # 179384-001). A number of analytes were detected between

COOLER RECEIPT CHECKLIST

Login#: 179384 Date Received: 5/11/05 Number of Coolers: 1
Client: MACTEC Project: Presidio - BBDA

A. Preliminary Examination Phase
Date Opened: 5/11/05 By (print): Peter P. (sign)

1. Did cooler come with a shipping slip (airbill, etc.)? ... YES (NO)
   If YES, enter carrier name and airbill number:
2. Were custody seals on outside of cooler? ... YES (NO)
   How many and where? Seal date: Seal name:
3. Were custody seals unbroken and intact at the date and time of arrival? ... YES NO N/A
4. Were custody papers dry and intact when received? ... (YES) NO
5. Were custody papers filled out properly (ink, signed, etc.)? ... (YES) NO
6. Did you sign the custody papers in the appropriate place? ... (YES) NO
7. Was project identifiable from custody papers? ... (YES) NO
   If YES, enter project name at the top of this form.
8. If required, was sufficient ice used? Samples should be 2-6 degrees C. ... YES NO
   Type of ice: WET Temperature: On ICE

B. Login Phase
Date Logged In: 5/11/05 By (print): Peter P. (sign)

1. Describe type of packing in cooler: Bubblewrap
2. Did all bottles arrive unbroken? ... (YES) NO
3. Were labels in good condition and complete (ID, date, time, signature, etc.)? ... (YES) NO
4. Did bottle labels agree with custody papers? ... (YES) NO
5. Were appropriate containers used for the tests indicated? ... (YES) NO
6. Were correct preservatives added to samples? ... YES NO N/A
7. Was sufficient amount of sample sent for tests indicated? ... (YES) NO
8. Were bubbles absent in VOA samples? If NO, list sample Ids below ... YES NO N/A
9. Was the client contacted concerning this sample delivery? ... YES NO
   If YES, give details below.
   Who was called? By whom? Date:

	Mfg & Lot # / LIMS # / Time	Date/Initials
Sand weighed out for QC samples	EM 4028452	SLK 05/12/05
Samples were dried with baked, CH_2Cl_2-rinsed granular Na_2SO_4	EM 4130507	
1.0 mL of surrogate solution was added to all samples	S369F	
1.0 mL of matrix spiking solution was added to all spikes	S212B	
≥100mL 1:1 CH_2Cl_2:Acetone was added to all: CH_2Cl_2	EM 45071	
Acetone	EM 44233	
Samples were: ☑ sonicated 3 times ☐ soxhlet extractors on at:	✓	
soxhlets off at:	N/A	
Extracts filtered through baked, CH_2Cl_2-rinsed powdered Na_2SO_4	EM 4436507 / EM 4413463	
Concentrated: ☑ to volumes as noted above ☐ to clean-up volume	✓	
Clean-up (if necessary): ☐ GPC (see GPC run log) ☐ Silica Gel	N/A	
Concentrated to final volumes as noted above	✓

CASE NARRATIVE

Laboratory number:	**179445**
Client:	**Mactec, Inc.**
Project:	**57255 001 22**
Location:	**Presidio / Baker Beach**
Request Date:	**05/13/05**
Samples Received:	**05/13/05**

This hardcopy data package contains sample and QC results for eleven soil samples, requested for the above referenced project on 05/13/05. The samples were received on ice and intact.

TPH-Purgeables and/or BTXE by GC (EPA 8015B):
Low surrogate recoveries were observed for bromofluorobenzene (FID) in BBSB109(0.0) (lab # 179445-006), DUP(050512) (lab # 179445-007), and the MSD of BBSB108(0.0) (lab # 179445-004), due to matrix interference; the corresponding trifluorotoluene (FID) surrogate recoveries were within limits, and these low surrogate recoveries were confirmed by re-analysis. No other analytical problems were encountered.

TPH-Extractables by GC (EPA 8015B):
Low surrogate recovery was observed for hexacosane in the MSD for batch 102056; the parent sample was not a project sample. High surrogate recovery was also observed for hexacosane in DUP(050512) (lab # 179445-007), due to matrix interference. No other analytical problems were encountered.

Volatile Organics by GC/MS (EPA 8260B):
Low responses were observed for bromomethane and chloromethane in the ICV analyzed 05/05/05 13:30; these analytes were not detected at or above the RL in the associated samples. High response was observed for hexachlorobutadiene in the ICV analyzed 05/05/05 13:30; this analyte was not detected at or above the RL in the associated samples. Low responses were observed for 1,1,2,2-tetrachloroethane and 1,2,3-trichloropropane in the CCV analyzed 05/17/05 10:28; these analytes met minimum response criteria. High responses were observed for many analytes in the CCV analyzed 05/16/05 10:21 and the CCV analyzed 05/16/05 11:23; these analytes were not detected at or above the RL in the associated samples. All samples were analyzed outside of hold time due to a communication error during analysis. The client was notified and requested analysis of the samples to continue. The Encore samples were all analyzed by May 16, 2005; affected data was qualified with "b". This data is valid for informational purposes. Low recoveries were observed for a number of analytes in the MS/MSD of BBSB108(0.0) (lab # 179445-004), due to matrix interference; these low recoveries were confirmed by re-analysis, and the LCS was within limits. High RPD was observed for toluene, chlorobenzene, and trichloroethene, due to matrix interference; the high RPD was confirmed by re-analysis, and these analytes were not detected at or above the RL in the associated samples. High recovery was observed for 1,1-dichloroethene in the MSD for batch 102078; the parent sample was not a project sample, the LCS was within limits, the associated RPD was within limits, and the high recovery

CASE NARRATIVE

Laboratory number:	**179445**
Client:	**Mactec, Inc.**
Project:	**57255 001 22**
Location:	**Presidio / Baker Beach**
Request Date:	**05/13/05**
Samples Received:	**05/13/05**

Volatile Organics by GC/MS (EPA 8260B):
was not associated with any reported results. Methylene chloride was detected above the RL in BBSB108(2.0) (lab # 179445-005), BBSB109(2.0) (lab # 179445-008), and BB2ASB112(0.5) (lab # 179445-009); this analyte is a common laboratory contaminant. Methylene chloride was also detected between the MDL and the RL in a number of samples. No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
High responses were observed for benzo(g,h,i)perylene, dibenz(a,h)anthracene, and indeno(1,2,3-cd)pyrene in the CCV analyzed 05/17/05 20:04; these analytes were not detected at or above the RL in the associated samples, and affected data was qualified with "b". Low internal standard response was observed for perylene-d12 in a number of samples, due to the dark, viscous nature of the sample extracts. No other analytical problems were encountered.

Pesticides (EPA 8081A):
High ICAL percent RSDs (relative standard deviations) were observed for beta-BHC and delta-BHC in the calibration analyzed 05/17/05 23:14; average ICAL %RSD met method requirements, and these analytes were not detected at or above the RL in the associated samples. Low responses were observed for beta-BHC and endrin aldehyde in the ICV analyzed 05/18/05 02:57; average ICV drift met method requirements, and these analytes were not detected at or above the RL in the associated samples. High response was observed for methoxychlor in the ICV analyzed 05/12/05 12:27; average ICV drift met method requirements, and this analyte was not detected at or above the RL in the associated sample. Low responses were observed for beta-BHC, delta-BHC, and endrin aldehyde in the CCV analyzed 05/18/05 16:51 and the CCV analyzed 05/19/05 00:06; average CCV drift met method requirements. High responses were observed for 4,4'-DDD, 4,4'-DDE, and dieldrin in the CCV analyzed 05/19/05 00:06; average CCV drift met method requirements. All samples were diluted due to the dark, viscous nature of the sample extracts. No other analytical problems were encountered.

PCBs (EPA 8082):
No analytical problems were encountered.

Metals (EPA 6020 and EPA 7471A):
High recovery was observed for zinc in the MS of BB2ASB100(4.0) (lab # 179384-001); the BS/BSD were within limits. High RPD was also observed for zinc in the MSD of BB2ASB100(4.0) (lab # 179384-001); the RPD was acceptable

Metals (EPA 6020 and EPA 7471A):
in the BS/BSD. Response exceeding the instrument's linear range was observed for barium in the MS/MSD of BB2ASB100(4.0) (lab # 179384-001). High % difference was observed for molybdenum in the serial dilution of BB2ASB100(4.0) (lab # 179384-001). A number of analytes were detected between the MDL and the RL in the method blank for batch 102065. No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):
No analytical problems were encountered.

COOLER RECEIPT CHECKLIST

Login#: 179445 Date Received: 5-13-05 Number of Coolers: 1
Client: Mactec Project: Presidio

A. Preliminary Examination Phase
Date Opened: 5-13-05 By (print): Troy Windsor (sign) Troy E Windsor

1. Did cooler come with a shipping slip (airbill, etc.)? YES (NO)
   If YES, enter carrier name and airbill number:
2. Were custody seals on outside of cooler? YES (NO)
   How many and where: Seal date: Seal name: N/A
3. Were custody seals unbroken and intact at the date and time of arrival? YES NO
4. Were custody papers dry and intact when received? (YES) NO
5. Were custody papers filled out properly (ink, signed, etc.)? (YES) NO
6. Did you sign the custody papers in the appropriate place? (YES) NO
7. Was project identifiable from custody papers? (YES) NO
   If YES, enter project name at the top of this form.
8. If required, was sufficient ice used? Samples should be 2-6 degrees C. (YES) NO
   Type of ice: Wet Temperature: Cold - no temp blank

B. Login Phase
Date Logged In: 5-13-05 By (print): Troy Windsor (sign) Troy E Windsor

1. Describe type of packing in cooler: In ziploc type bags
2. Did all bottles arrive unbroken? (YES) NO
3. Were labels in good condition and complete (ID, date, time, signature, etc.)? (YES) NO
4. Did bottle labels agree with custody papers? (YES) NO
5. Were appropriate containers used for the tests indicated? (YES) NO
6. Were correct preservatives added to samples? YES NO N/A
7. Was sufficient amount of sample sent for tests indicated? (YES) NO
8. Were bubbles absent in VOA samples? If NO, list sample Ids below. YES NO N/A
9. Was the client contacted concerning this sample delivery? YES NO
   If YES, give details below.
   Who was called? By whom? Date:

Sand weighed out for QC samples	EM 44029452	SLK 05/16/05
Samples were dried with CH2Cl2-rinsed granular Na2SO4	EM 44135453	
1.0 mL of TEH_SURR surrogate solution was added to all samples	S449C	
1.0 mL of TEH_SP matrix spiking solution was added to all spikes	S305D	
≥ 75 mL of 1+1 (CH_2Cl_2+Acetone) was added to all CH_2Cl_2	EM 45005	
Acetone	EM 45033	
Samples were: ☐ sonicated 3 times ☑ placed on shaker table at:	1330	
taken off shaker table at:	1530	
Extracts filtered through baked, rinsed powdered Na_2SO_4	EM 44135453 | EM 44303507	
Concentrated to volumes as noted above	✓

SLK 05/17/05

	Mfg & Lot # / LIMS # / Time	Date/Initials
Sand weighed out for QC samples	EM44028452	SLK 05/17/05
Samples were dried with baked, CH_2Cl_2-rinsed granular Na_2SO_4	EM44303507	
1.0 mL of surrogate solution was added to all samples	S369E	
1.0 mL of matrix spiking solution was added to all spikes	S212B	
≥100mL 1:1 CH_2Cl_2:Acetone was added to all: CH_2Cl_2	EM45071	
Acetone	EM45019	
Samples were: ☑ sonicated 3 times ☐ soxhlet extractors on at:	✓	
soxhlets off at:	N/A	
Extracts filtered through baked, CH_2Cl_2-rinsed powdered Na_2SO_4	EM44303507 / EM44135483	
Concentrated: ☑ to volumes as noted above ☐ to clean-up volume	✓ TGRAN	
Clean-up (if necessary): ☐ GPC (see GPC run log) ☐ Silica Gel	N/A	
Concentrated to final volumes as noted above	✓

CASE NARRATIVE

Laboratory number:	**179564**
Client:	**Mactec, Inc.**
Project:	**57255 001 22**
Location:	**Presidio / Baker Beach**
Request Date:	**05/20/05**
Samples Received:	**05/20/05**

This hardcopy data package contains sample and QC results for one soil sample, requested for the above referenced project on 05/20/05. The sample was received intact.

Volatile Organics by GC/MS (EPA 8260B):
Low response was observed for bromomethane in the ICV analyzed 05/18/05 19:12; this analyte was not detected at or above the RL in the associated samples. High responses were observed for trichlorofluoromethane and Freon 12 in the CCV analyzed 05/20/05 09:16; these analytes were not detected at or above the RL in the associated samples. High recoveries were observed for 1,1-dichloroethene in the MS/MSD for batch 102224; the parent sample was not a project sample, the LCS was within limits, the associated RPD was within limits, and this analyte was not detected at or above the RL in the associated sample. No other analytical problems were encountered.

Semivolatile Organics by GC/MS SIM (EPA 8270C-SIM):
Low responses were observed for benzo(a)anthracene, benzo(k)fluoranthene, and pyrene in the CCV analyzed 06/02/05 00:56; these analytes met minimum response criteria, and affected data was qualified with "b". High responses were observed for dibenz(a,h)anthracene and indeno(1,2,3-cd)pyrene; these analytes were not detected at or above the RL in the associated sample. No other analytical problems were encountered.

Pesticides (EPA 8081A):
High responses were observed for a number of analytes in the CCV analyzed 06/02/05 11:39; average CCV drift met method requirements. High responses were observed for 4,4'-DDD and methoxychlor in the CCV analyzed 06/02/05 22:29 and the CCV analyzed 06/04/05 00:29; average CCV drift met method requirements, and these analytes were not detected at or above the RL in the associated samples. Low responses were observed for gamma-BHC and 4,4'-DDT in the CCV analyzed 06/04/05 07:53 and the CCV analyzed 06/06/05 16:43; average CCV drift met method requirements. High surrogate recovery was observed for decachlorobiphenyl in BBSB101(0.5) (lab # 179564-001); the corresponding TCMX surrogate recovery was within limits, and no target analytes were detected in the sample. BBSB101(0.5) (lab # 179564-001) was diluted due to the dark, viscous nature of the sample extract. No other analytical problems were encountered.

PCBs (EPA 8082):
High responses were observed for Aroclor-1016 and Aroclor-1260 in the CCV analyzed 06/04/05 05:11; these analytes were not detected at or above the RL

Curtis & Tompkins, Ltd.

CASE NARRATIVE

Laboratory number:	**179564**
Client:	**Mactec, Inc.**
Project:	**57255 001 22**
Location:	**Presidio / Baker Beach**
Request Date:	**05/20/05**
Samples Received:	**05/20/05**

PCBs (EPA 8082):
in the associated sample. No other analytical problems were encountered.

Metals (EPA 6020 and EPA 7471A):
High responses were observed for barium and beryllium in the CCV analyzed 05/24/05 18:31; these analytes were not detected at or above the RL in the associated sample. High recoveries were observed for chromium in the MS/MSD of BBSB101(0.5) (lab # 179564-001); the BS/BSD were within limits, and the associated RPD was within limits. High % difference was observed for vanadium in the serial dilution of BBSB101(0.5) (lab # 179564-001). A number of analytes were detected between the MDL and the RL in the method blank for batch 102304; these analytes were detected in the sample at a level at least ten times that of the blank. No other analytical problems were encountered.

Moisture (ASTM D2216/CLP):
No analytical problems were encountered.
